

Package ‘SaturnCoefficient’

February 14, 2025

Title Statistical Evaluation of UMAP Dimensionality Reductions

Version 1.4

Description A metric expressing the quality of a UMAP layout. This is a package that contains the `Saturn_coefficient()` function that reads an input matrix, its dimensionality reduction produced by UMAP, and evaluates the quality of this dimensionality reduction by producing a real value in the [0; 1] interval. We call this real value Saturn coefficient. A higher value means better dimensionality reduction; a lower value means worse dimensionality reduction.
Reference: Davide Chicco et al. ``The Saturn coefficient for evaluating the quality of UMAP dimensionality reduction results'' (2025, in preparation).

calculatesSaturnContinuityTrustworthiness
Function that calculates the Saturn coefficient, trustworthiness score, and the continuity score of a UMAP dimensionality reduction

Description

Function that calculates the Saturn coefficient, trustworthiness score, and the continuity score of a UMAP dimensionality reduction

Usage

```
calculatesSaturnContinuityTrustworthiness(
  original_matrix,
  umap_output_layout,
  VERBOSE
)
```

Arguments

original_matrix	input matrix
umap_output_layout	output matrix of UMAP applied to original_matrix
VERBOSE	prints some intermediate message to standard output or not

Value

a dataframe containing the Saturn coefficient, the trustworthiness score, and the continuity score

Examples

```
this_nrows <- 200
this_ncols <- 100
this_min <- 0
this_max <- 10000
noise_random_matrix <- matrix(runif(n = this_nrows * this_ncols,
  min = this_min, max = this_max), nrow = this_nrows)
input_matrix <- as.matrix(noise_random_matrix)
these_nearest_neighbors <- 15
```

```

this_min_dist <- 0.05

library("umap")
custom.settings <- umap::umap.defaults
custom.settings$n_nearest_neighbors <- these_nearest_neighbors
custom.settings$min_dist <- this_min_dist

x_umap <- umap::umap(input_matrix, config=custom.settings)

this_verbose <- FALSE
theseThreeMetrics <- calculatesSaturnContinuityTrustworthiness(input_matrix,
  x_umap$layout, this_verbose)
print(theseThreeMetrics)

```

continuity_score

Function that calculates the continuity score of a UMAP dimensionality reduction

Description

Function that calculates the continuity score of a UMAP dimensionality reduction

Usage

```
continuity_score(original_matrix, umap_output_layout, VERBOSE)
```

Arguments

original_matrix	input matrix
umap_output_layout	output matrix of UMAP applied to original_matrix
VERBOSE	prints some intermediate message to standard output or not

Value

a real value containing the continuity score

Examples

```

this_nrows <- 200
this_ncols <- 100
this_min <- 0
this_max <- 10000
noise_random_matrix <- matrix(runif(n = this_nrows * this_ncols,
  min = this_min, max = this_max), nrow = this_nrows)
input_matrix <- as.matrix(noise_random_matrix)
these_nearest_neighbors <- 15
this_min_dist <- 0.05

```

```

library("umap")
custom.settings <- umap::umap.defaults
custom.settings$n_nearest_neighbors <- these_nearest_neighbors
custom.settings$min_dist <- this_min_dist

x_umap <- umap::umap(input_matrix, config=custom.settings)

this_verbose <- FALSE
thisCon <- continuity_score(input_matrix, x_umap$layout", this_verbose)
cat("continuity = ", thisCon, "\n", sep="")

```

Saturn_coefficient *Function that calculates the Saturn coefficient to quantify the quality of a UMAP dimensionality reduction*

Description

Function that calculates the Saturn coefficient to quantify the quality of a UMAP dimensionality reduction

Usage

```
Saturn_coefficient(original_matrix, umap_output_layout, VERBOSE)
```

Arguments

original_matrix	input matrix
umap_output_layout	output matrix of UMAP applied to original_matrix
VERBOSE	prints some intermediate message to standard output or not

Value

a real value containing the Saturn coefficient

Examples

```

this_nrows <- 200
this_ncols <- 100
this_min <- 0
this_max <- 10000
noise_random_matrix <- matrix(runif(n = this_nrows * this_ncols,
min = this_min, max = this_max), nrow = this_nrows)
input_matrix <- as.matrix(noise_random_matrix)
these_nearest_neighbors <- 15
this_min_dist <- 0.05

```

```

library("umap")
custom.settings <- umap::umap.defaults
custom.settings$n_neighbors <- these_nearest_neighbors
custom.settings$min_dist <- this_min_dist

x_umap <- umap::umap(input_matrix, config=custom.settings)

this_verbose <- FALSE
thisSaturn <- Saturn_coefficient(input_matrix, x_umap$layout, this_verbose)
cat("Saturn coefficient = ", thisSaturn, "\n", sep="")

```

trustworthiness_score *Function that calculates the trustworthiness score of a UMAP dimensionality reduction*

Description

Function that calculates the trustworthiness score of a UMAP dimensionality reduction

Usage

```
trustworthiness_score(original_matrix, umap_output_layout, VERBOSE)
```

Arguments

original_matrix	input matrix
umap_output_layout	output matrix of UMAP applied to original_matrix
VERBOSE	prints some intermediate message to standard output or not

Value

a real value containing the trustworthiness score

Examples

```

this_nrows <- 200
this_ncols <- 100
this_min <- 0
this_max <- 10000
noise_random_matrix <- matrix(runif(n = this_nrows * this_ncols,
    min = this_min, max = this_max), nrow = this_nrows)
input_matrix <- as.matrix(noise_random_matrix)
these_nearest_neighbors <- 15
this_min_dist <- 0.05

library("umap")
custom.settings <- umap::umap.defaults

```

```
custom.settings$"n_neighbors" <- these_nearest_neighbors  
custom.settings$"min_dist" <- this_min_dist  
  
x_umap <- umap(input_matrix, config=custom.settings)  
  
this_verbose <- FALSE  
thisTW <- trustworthiness_score(input_matrix, x_umap$"layout", this_verbose)  
cat("trustworthiness = ", thisTW, "\n", sep="")
```
