

White runs with

alone:

```

\documentclass[border=0.5cm, varwidth=10cm]{standalone}
\usepackage[kernel = lua]{../../latex/pgf-go}

\pgfgoset{profile = pgfgo, view = {scale = 0.45}}

\begin{document}
  % Inside a goban, TikZ draws with the intersections of the board: (go cs:C3). The views
  % can leave out the arrows and the lines of pgf-go.

  \begin{goban}[9, name = plan]
    \stones[b]{C3, C5, D7, G3}
    \stones[w]{E3, F5, G6, C7}
    \draw[red, very thick, rounded corners] (go cs:B2) rectangle (go cs:D6);
    \node[red, fill = white, draw, font = \small] at (go cs:C4) {moyo};
    \draw[blue, very thick, ->] (go cs:F5) to[bend right] (go cs:D8);
    \arrow{G3}{H5}
    \line{E3}{G6}
  \end{goban}

  \medskip
  White runs with \pgfgoview{plan}{E2:H7}; without the arrow and the line, the stones
  alone: \pgfgoview[arrows = false, lines = false]{plan}{E2:H7}.
\end{document}

```
